AB - JP2002102179 NOVELTY - The mobile telephone (100) has a main body (40) that has a sensor (10) for transmitting detected vital signs to a vital signs measuring unit. When abnormality is detected in vital signs data collected from the sensor, the abnormality is output externally to notify user through a mobile telephone function unit.

- DETAILED DESCRIPTION - An interface connects the mobile telephone function unit and vital signs measuring unit.
- USE - Can be used to measure e.g. heart rate, body temperature, blood pressure, electrocardiogram.
- ADVANTAGE - Enable early discovery of abnormality in detected vital signs. Does not need to process additional data since vital signs measurement function is added to mobile telephone.
- DESCRIPTION OF DRAWING(S) - The figure shows the external view of the mobile telephone with vital signs measurement function. Drawing includes non-English language text.

TI - PORTABLE TELEPHONE WITH HEALTH CONDITION MEASURING FUNCTION  
AB - PROBLEM TO BE SOLVED: To provide a portable telephone with health condition measuring function capable of measuring health condition such as the heart rate, bodily temperature, blood pressure, an electrocardiogram or the like of a human body if necessary and capable of reporting the measured results to the outside by portable telephone function when abnormality is confirmed.

JP2002102179

- DESCRIPTION: The portable telephone with health condition measuring function is equipped with a main body, constituted of a portable telephone function part having portable telephone function, a health condition measuring function part having health condition measuring function and an interface part for mutually connecting the portable telephone function part and the health condition measuring function part, and a sensor for sending health condition data to the health condition measuring function part. The health condition measuring function part collects the health condition data sent out of the sensor and reports abnormal data to the outside through the portable telephone function part when abnormality is detected in collected health condition data.
